

## Posters

Lourdes Amigó	<b>Negative c-axis longitudinal magnetoresistance in FeSe</b>
Leandro Arancibia	<b>Towards electrical domain-wall control in polyacetylene-based electronic nano-devices</b>
Selena Barragán	<b>Advancing Topological Electronics with dual-gated Quantum Spin Hall Devices based on III-V Semiconductors</b>
Julia Besprosswanny	<b>Topological Fermi Arcs and Surface Superconductivity in t-PtBi<sub>2</sub></b>
Muriel Bonetto	<b>Local thermometry for non-equilibrium vibrational states of an ion chain</b>
Geronimo Jesus Caselli	<b>Two interacting qubits as a thermal machine</b>
Victor Correa	<b>Quantum oscillations evidence of sixfold fermions in the cubic Dirac semimetal <math>\beta</math>-PtBi<sub>2</sub></b>
Sebastian Esteban Deghi	<b>Second-order adiabatic expansion in quantum transport: corrections to the isolated mass due to electron forces</b>
Jose Tomas Este Jaloveckas	<b>Superconducting circuit architecture supporting multi-mode qubits</b>
Niclas Heinsdorf	<b>Higher Berry Curvature from Matrix Product States</b>
Nohora Alejandra Hernandez Cepeda	<b>Nagaoka Ferromagnetism in finite-size arrays: Shaped by Connectivity, Disrupted by Fields.</b>
Juan Herrera Mateos	<b>Nonlocal thermoelectricity in quantum wires as a signature of Bogoliubov-Fermi points</b>
Iksu Jang	<b>Elastic Quantum Criticality in Nematics and Altermagnets via the Elasto-Caloric Effect</b>

## Posters

Oleg Janson	Weakly coupled triangles in a $S=1/2$ star lattice of an organic-inorganic cuprate
Erika Mehring	Hysteresis and effective reciprocity breaking due to current-induced forces
Gonzalo Alfredo Mogensen	Near 2D limit in FeSe by single crystal exfoliation
Avedis Neehus	Genuine topological Anderson insulator from impurity induced chirality reversal
Adelina Orlandini	Non-trivial entanglement structure across a local topological quantum phase transition
Andrei Pavlov	Topological transitions in quantum jump dynamics: Hidden exceptional points
Lucila Peralta Gavensky	The Středa Formula for Floquet Systems
Ihor Poboiko	Measurement-induced Lévy flights of quantum information
Ignacio Luciano Pomponio	Two-spinon bound states evolution in the magnetic spectrum of triangular antiferromagnets
Lucas Pupim	Adatom engineering magnetic order in superconductors: Applications to altermag- netic superconductivity
Kelvin Julinio Ramos Villalobos	Development of photon detectors based on granular aluminum superconducting resonators
Corina Révora	Superposition of n squeezed states for quantum metrology and for encoding quantum information
Maurice Indrian Rieger	Towards quantum many-body physics in two dimensions with highly magnetic atoms of Dysprosium

## Posters

Gabriel Fernando Rodriguez Ruiz	<b>Superconductivity in two-dimensional heterostructures with spin-orbit coupling</b>
Adrian Rubio Lopez	<b>Stochastic resonant behaviours and steady state control in harmonic systems</b>
Daniel Schultz	<b>Electric field control of a quantum spin liquid in weak Mott insulators</b>
Thibault Scoquart	<b>Scaling of many-body localization transitions: Correlations and dynamics in Fock space and real space</b>
Veronika Stangier	<b>Pauli Limiting near a Quantum Critical Point</b>
Charles Steward	<b>Dynamic paramagnon-polarons in altermagnets</b>
Piotr Surowka	<b>Non-equilibrium charge-vortex duality at finite temperature</b>
Davide Valentinis	<b>Interplay between quantum criticality, superconductivity, and magnetic fields in exactly solvable models for strange metals</b>
Cecilia Ileana Ventura	<b>MODELING Bi-based LAYERED SUPERCONDUCTORS: Electronic Properties</b>
Carolina Vlatko	<b>Vibrational dynamics in ultracold ion systems</b>
