

## Posters

- Donatella Albano **Controlling magnetic skyrmion Brownian motion through Focused-Ion-Beam patterning**
- Erwan Aubouin **Development of a hybrid CMOS-spintronic crossbar architecture for small networks of interconnected spintorque nano-oscillators: application to Ising machines**
- Anja Bartelmei **Delay-embedding in spatio-temporal optical reservoir computing**
- Simone Bonino **Spatial Reservoir Computing Based on Spin–Orbit Torque Driven Skyrmion Motion**
- Finn Marten Boyer **Exploring Reinforcement Learning for Particle Transport in the Presence of Inhomogeneities**
- Arthur Courberand **Study of coupled spiking magnetic tunnel junctions**
- Connor Devitt **Advances in YIG-on-GGG Spin-Wave Fabrication**
- Thibaut Devolder **Self-induced Floquet states via three-wave processes in synthetic antiferromagnets**
- Jack Griffiths **Diffusion-Based Surrogate Models for Optimising and Inverse Design of Physical Computing Systems**
- Maximilian Hofschien **Small-Form-Factor Peripheral Circuitry for Hybrid Magnonic Systems**
- Andrey Iljin **All-optical switching in liquid crystals through order parameter modulation**
- Loukas Kokkinos **Floquet states modulation in spin-torque oscillators for unconventional computing**
- Kilian Leutner **Skyrmion devices for physics-based non-conventional computing**
- Yung Cheng Li **Magnetic dynamics in isotropic ferromagnetic insulator**

## Posters

Baojia Liu	<b>Toward Cascaded Spin–Acoustic Neuromorphic Hardware: Integrated Synaptic and Neuronal Functions in SAW–SOT Devices</b>
Atreya Majumdar	<b>Physical Reservoir Computing with Ferroelectric Oxides</b>
Maryam Massouras	<b>Real-time characterization of vortex core reversal under nonlinear gyrotropic motion</b>
Levente Maucha	<b>Spin-wave holography for neuromorphic computing</b>
Tobias Mohr	<b>Machine Learning-Based Spin Structure Detection in Engineered X/CoFeB/MgO Multilayers</b>
David Navas	<b>Spinwave modes in synthetic antiferromagnetic nanodots</b>
Adam Papp	<b>Scalable spin-wave neural networks</b>
Gauthier Philippe	<b>Hysteretic excitation of self-induced Floquet magnons in vortex-state magnetic tunnel junctions</b>
Igor Polonskiy	<b>Reinforcement</b>
Sina Ranjbar	<b>From Concepts to Scalable Spintronic Devices for Emerging Technologies</b>
Thomas Winkler	<b>Multi-Value Probabilistic Computing with Current-controlled Skyrmion Diffusion</b>
Zeling Xiong	<b>Predicting the future with magnons</b>
Tomoki Yamagami	<b>Sign-dependent autocorrelation benefits in time-series-based decision making</b>
Zhibo Zhao	<b>Voltage-Modulated Interaction-Driven Dynamics in Macrospin Networks for Low-Power Neuromorphic Computing</b>
