

## Posters

1. Luca Alt **Quantum wires defined by Cleaved Edge Overgrowth – Challenges & future goals**
2. Ghada Badawy **InSb nanowires for advanced quantum devices**
3. Christian Bäuml **Quantum transport through carbon nanotube NbSe<sub>2</sub> hybrid devices for Majorana Fermion detection**
4. Jonathan Becker **Low-dimensional transport properties of InAs-based nanowires**
5. Arunav Bordoloi **Double quantum dot tunneling magnetoresistance without ferromagnetic contacts**
6. Erik Cheah / Clemens Todt **Merging MBE grown semiconductor heterostructures with in-situ deposited thin film superconductors towards top-down topological quantum computation**
7. Olivier Faist **Parallel semiconductor nanowire based electronic devices**
8. Felix Friedrich **On the preparation and electronic properties of clean superconducting Nb(110) surfaces**
9. Sergej Fust **Advanced thermoelectric properties in high-mobility GaAs/AlGaAs core-shell nanowires**
10. Max Geier **Second-order topological insulators and superconductors with an order-two crystalline symmetry**
11. Max Hoskam **One-dimensional helical states in SnTe topological crystalline insulator nanowires: Modelling and growth**
12. Andreas K. Hüttel **Shaping electron wave functions in a nanotube tubewith a parallel magnetic field**
13. Niklas Hüttner **Coulomb blockade enhanced carbon nanotube optomechanics**
14. Felix Jekat **Electron pair charging in gate-defined quantum dots in indium antimonide nanowires**
15. Jason Jung **Selective area semiconductor-superconductor networks**
